If you have questions, contact us and [we'll start free consulting on all organizational and technical issues concerning your business needs.](#)

Setup of development process

BCS-IT development process is based on following standards and methodologies:

- CMMI
- IEEE type standards
- Rational Unified Process
- ISO 9001:2000 (ISO/IEC 90003:2004 Software engineering — Guidelines for the application of ISO 9001:2000 to computer software)

Standard software development process is adopted specifically to suit your project requirements. “Best practices” approach is used to let you immediately feel the cooperation value.

Project documentation and the creation process makes mutual understanding between the Customer and project team, creates a natural roadmap towards effective business relations. BCS-IT management team experience allows us to find the balance between strict quality requirements and flexibility of software development process.

Organizational points of Software Development Process

To assure your comfort we are ready to provide you with:

- Various ways of communication (regular and event-driven status reports, negotiations by phone, instant messengers, audio/video conferences, face-to-face meetings)
- Full set of IPR (Intellectual Property Rights) protection measures
- Visibility over projects
- Security and confidentiality protection measures
